
IT CAPSTONE PROJECT TOPICS IDEAS

1. What is a digital system architect?
2. The latest about smart systems administrator
3. Malware
4. Deciphered codes when choosing PINS and passwords
5. Outdated operating systems
6. Robot assisted surgeries
7. Databases and privacy
8. Cloud computing security
9. World wide web security
10. Social media future
11. Artificial intelligence
12. ATM networks and multimedia
13. Genetic engineering
14. Human and robot interaction
15. Wireless transmissions
16. Challenges and opportunities in cloud computing
17. Website encryption
18. BIOS modifications and functions
19. Biometrics
20. Security risks and outdated operating systems
21. Sensor networks evolution
22. Computers and genetic engineering
23. 3D rendering algorithms
24. Bioinformatics
25. Simulation future
26. Single buffered routers
27. Programmable shading
28. Web development challenges
29. The latest on network congestion control systems
30. Human modeling

31. Networking and multilayer switching
32. Internet censorship
33. Computer security and cryptography
34. Cloning
35. Human genomes
36. Human life and cloning technologies
37. Human cloning
38. Virtual reality
39. Choosing an embryo with disability
40. Genetic engineering – the latest
41. IT applications and graphic systems
42. Ancestry DNA testing
43. App development for productivity
44. Workplace security and app development
45. DNA modification
46. Social media technology of the future
47. Social media and classrooms
48. Technology in the classrooms
49. Alternative treatments
50. Workplace and technology consumption
51. Brain modification and technology
52. Texting and technology
53. Dangers of texting while driving
54. Privacy and internet use
55. Cell phone use and education
56. Google and technology
57. Bomb making and technology
58. Communication technology
59. Intelligence and web use
60. Unlimited data storage

61. Robotics and computer science
62. Reading and apps
63. Technology addiction
64. Genetically engineering babies with at least two parents
65. Identity and DNA information
66. Latest on virtual reality research and finding
67. Artificial intelligence
68. The challenges of computer programmers
69. Modern warfare technology
70. Social media consumption
71. Bomb technology
72. Drones and modern technology
73. Nuclear technology
74. Open source tools
75. Productivity tools to improve employee performance
76. Cloud computing and firm security
77. Robot teachers
78. Internet security
79. Software and hardware cloud computing
80. Machine learning
